

# Billabong DENILIQVIN PP D5

---

The Droughtmaster breed was developed at the turn of the century in Queensland Australia and has approximately 50% *Bos indicus* and 50% *Bos taurus* bloodlines. The breed is ideally suited for beef production in tropical regions to overcome the perennial problems of drought, cattle tick, heat, eye cancer and many other issues that reduce beef production and profitability. Deniliquin is a homozygous polled bull with moderate frame and outstanding temperament.
